

## Quiz 03 (Set B (Solution))

SIAS, Krea University (AY 2025-26)

Mathematical Methods for Economics (Course Code: ECON211)

05 September 2025

### Multiple Choice Questions

1. (1 point) If  $f(x) = x^2$ ,  $g(x) = x^2 + 3$  and  $h(x) = (x + 3)^2$ , then
- A. the graph of  $g(x)$  can be obtained by shifting  $f(x)$  downwards by 3 units.
  - B. the graph of  $h(x)$  can be obtained by shifting  $f(x)$  to the right by 1 unit.
  - C. the graph of  $h(x)$  can be obtained by shifting  $f(x)$  to the left by 1 unit.
  - D. the graph of  $g(x)$  can be obtained by shifting  $f(x)$  upwards by 3 units.

Answer: D

**Solution:** This is very straightforward.  $g(x)$  is  $f(x)$  shifted up three units and  $h(x)$  is  $f(x)$  being shifted to the left by three units.

—  $f(x) = x^2$     —  $h(x) = (x + 3)^2$     —  $g(x) = x^2 + 3$

2. (1 point) Let  $f(x) = 100$ . Then,
- A.  $f^{-1}(x)$  does not exist.
  - B.  $f^{-1}(x) = 100$
  - C.  $f^{-1}(x) = \frac{1}{100}$
  - D.  $f^{-1}(x) = \frac{1}{100x}$

Answer: A

**Solution:** Consider two points in the domain of the function:  $x = 1$  and  $x = 2$ .

$f(1) = 100$  and  $f(2) = 100$ .

What happens when you 'invert' this function? You get:

$f^{-1}(100) = 1$  and  $f^{-1}(100) = 2$ .

This cannot be a valid function as it is not one-to-one. Therefore, the inverse does not exist.

3. (1 point) Consider the following statements:

**Statement (i):**

$\lim_{x \rightarrow 2} |x - 2|$  does not exist.

**Statement (ii):**

$f(x) = |x - 2|$  is not differentiable at  $x = 2$ .

- A. Both (i) and (ii) are correct.
- B. Statement (i) is correct but statement (ii) is wrong.
- C. Statement (i) is wrong but statement (ii) is correct.

D. Both (i) and (ii) are wrong.

Answer: C

Solution:

$$\text{LHL: } \lim_{x \rightarrow 2^-} |x - 2| = 0$$

$$\text{RHL: } \lim_{x \rightarrow 2^+} |x - 2| = 0$$

LHL = RHL. Therefore, the limit does exist.

$$\text{LHD: } \lim_{x \rightarrow 2^-} -1 = -1$$

$$(\text{since } |x - 2| = 2 - x \quad \forall x < 2)$$

$$\text{RHD: } \lim_{x \rightarrow 2^+} 1 = 1$$

$$(\text{since } |x - 2| = x - 2 \quad \forall x > 2)$$

LHD  $\neq$  RHD. Therefore,  $f(x)$  is not differentiable at  $x = 0$ .

### Short Answer Questions-I

4. (1 point) Compute  $\frac{dy}{dx}$  if  $y = 4x + \frac{2}{\sqrt{x}}$ .

Solution:

$$y = 4x + \frac{2}{\sqrt{x}}$$

$$\frac{dy}{dx} = 4 + \frac{d\left(\frac{2}{\sqrt{x}}\right)}{dx}$$

$$\frac{dy}{dx} = 4 + 2 \frac{d(x^{-1/2})}{dx}$$

$$\frac{dy}{dx} = 4 - 2\left(\frac{1}{2}x^{-3/2}\right)$$

Answer:

$$\frac{dy}{dx} = 4 - x^{-3/2}$$

5. (1 point) Compute the inverse of the following function:  $f(x) = \frac{3x - 1}{3x + 1}$ .

Solution:

$$y = f(x)$$

$$\Rightarrow y = \frac{3x - 1}{3x + 1}$$

$$\Rightarrow y(3x + 1) = 3x - 1$$

$$\Rightarrow 3xy + y = 3x - 1$$

$$\Rightarrow 3xy - 3x = -1 - y$$

$$\Rightarrow x(3y - 3) = -1 - y$$

$$\Rightarrow x = \frac{-1 - y}{3y - 3}$$

$$\Rightarrow x = \frac{1 + y}{3 - 3y}$$

$$\Rightarrow x = \frac{1}{3} \left( \frac{1 + y}{1 - y} \right)$$

Answer:

$$f^{-1}(x) = \frac{1}{3} \left( \frac{1 + x}{1 - x} \right)$$

6. (1 point) Calculate:  $\lim_{x \rightarrow \infty} \frac{4x^3 - 28x^2 + 20}{5x^3 - 22x^2 + 1009}$ .

**Solution:** Divide the whole expression by  $x^3$ .

$$\begin{aligned} \lim_{x \rightarrow \infty} \frac{4 - \frac{28}{x} + \frac{20}{x^3}}{5 - \frac{22}{x} + \frac{1009}{x^3}} \\ = \frac{4 - \lim_{x \rightarrow \infty} \frac{28}{x} + \lim_{x \rightarrow \infty} \frac{20}{x^3}}{5 - \lim_{x \rightarrow \infty} \frac{22}{x} + \lim_{x \rightarrow \infty} \frac{1009}{x^3}} \\ = \frac{4}{5} \end{aligned}$$

**Answer:**  $\lim_{x \rightarrow \infty} \frac{4x^3 - 28x^2 + 20}{5x^3 - 22x^2 + 1009} = \frac{4}{5}$

## Short Answer Questions-II

7. (2 points) The demand function for *Ruinmyshow* tickets is given by

$$p = -0.04q + 800$$

(a) (1 point) Compute the marginal revenue.

**Solution:**

$$\begin{aligned} TR &= (800 - 0.04q) \cdot q \\ TR &= (800 - 0.04q) \cdot q \\ TR &= 800q - 0.04q^2 \\ \Rightarrow MR &= 800 - 0.08q \end{aligned} \quad \text{(applying the power rule)}$$

**Answer:**  $\text{Marginal revenue} = 800 - 0.08q$

(b) (1 point) Calculate the approximate revenue from selling the 5001st ticket.

**Solution:** We know that  $MR(x)$  will approximate  $TR(x + 1)$ . Therefore, we need to compute  $MR(5000)$ .

$$\begin{aligned} MR(5000) &= 800 - 0.08q \\ \Rightarrow MR(5000) &= 800 - 0.08(5000) \\ \Rightarrow MR(5000) &= 800 - 400 \\ \Rightarrow MR(5000) &= 400 \end{aligned}$$

**Answer:**  $\text{The approximate revenue from selling the 5001st ticket is 400.}$

8. (2 points) There are two parts in this question.

(a) (1 point) Calculate  $a$  such that the following function is continuous for all  $x$ .  $f(x) = \begin{cases} ax - 2 & \text{if } x \leq 1 \\ 2x^2 + 1 & \text{if } x > 1 \end{cases}$

**Solution:** Condition for continuity at  $x = a$ :  $LHL = RHL = f(a)$ .

$$\begin{aligned}\text{LHL: } \lim_{x \rightarrow 1^-} f(x) &= \lim_{x \rightarrow 1^-} ax - 2 \\ &= a - 2\end{aligned}$$

$$\begin{aligned}\text{RHL: } \lim_{x \rightarrow 1^+} f(x) &= \lim_{x \rightarrow 1^+} 2x^2 + 1 \\ &= 2 + 1 \\ &= 3\end{aligned}$$

$$\begin{aligned}f(1) &= a - 2 \\ \Rightarrow a - 2 &= 3 \\ \Rightarrow a &= 5\end{aligned}$$

**Answer:**  $a = 5$ .

(b) (1 point) Compute  $\frac{dy}{dx}$  if  $f(x) = \frac{2 - x^2}{2 + x^2}$ .

**Solution:** Let  $u = 2 - x^2$  and  $v = 2 + x^2$ .

$$\begin{aligned}u' &= -2x \\ v' &= 2x\end{aligned}$$

We know that, if  $f(x) = \frac{u}{v}$ ,  $f'(x) = \frac{vu' - uv'}{v^2}$ .

Applying the quotient rule, we get:

$$\begin{aligned}\frac{dy}{dx} &= \frac{(2 + x^2)(-2x) - (2 - x^2)(2x)}{(2 + x^2)^2} \\ \Rightarrow \frac{dy}{dx} &= \frac{-8x}{(2 + x^2)^2}\end{aligned}$$

**Answer:**  $\frac{dy}{dx} = \frac{-8x}{(2 + x^2)^2}$
