

Name:	Roll Number:

Midterm (Set C)
SIAS, Krea University (AY 2025-26)
Mathematical Methods for Economics (Course Code: ECON211)
18 August 2025

Maximum Points: 30

Duration: 90 minutes

Instructions and Advice:

- This is a closed book exam.
- This exam accounts for 30% of your grades.
- You need to answer 10 questions in all.
- All questions are compulsory. Points for each question are mentioned in parentheses.
- At no point during the exam, you are allowed to ask clarificatory questions. Make reasonable assumptions if you have doubts and proceed to answer the question.
- You are not permitted to use any electronic device including calculators.
 - To aid computation, some values are provided at the end of the question paper (see Appendix).
 - Please use reasonable approximations for all calculations.
- There is plenty of time. Use it wisely, do not rush.
- Show all your work. Answers that skip steps will receive penalty.
- Please highlight your main answer(s).
- All the best!

Short Answer Questions-I

1. (2 points) A bakery in Nalasopara specializes in baking teacakes. Each loaf of teacake requires butter, sugar, and flour. The bakery generously shared some sample data with us.

Input (in kg)	August 14	August 15	August 16
Butter	8	10	9
Sugar	2	3	3
Flour	4	5	4

The per kg prices of butter, sugar, and flour are ₹800, ₹200, and ₹50 respectively (these prices remain stable over the given period). Create two matrices, one for quantities (call it A) and one for prices (call it B). Compute and interpret AB .

2. (2 points) Compute $\sum_{k=5}^{k=8} (-2k^2 + 2k - 1)$.
3. (2 points) Netflix ran a survey on customer preferences on genre. 1,500 customers responded to the survey revealing that 600 preferred romance (R), 450 preferred drama (D), and 350 preferred action (A). The survey also showed that 200 customers preferred both romance and drama, 150 preferred romance and action, and 100 preferred both drama and action movies. How many preferred drama but not romance?
4. (2 points) Sketch the graph of the function $y = -3x + 4$ in the following domain: $x \in [-6, 4]$.

Short Answer Questions-II

5. (3 points) The value of a machine depreciates continuously at the annual rate of 8%. How many years will it take for the value of the machine to become one-tenth of its original value?
6. (3 points) There is a Japanese restaurant called *Zuru Zuru* in Shahpur Jat that specializes in ramen.
- (a) (2 points) If the restaurant sells Q ramen bowls, the price received per ramen bowl sold is $P = 100 - \frac{3}{4}Q$. The per-unit cost of assembling a bowl is $P = 60 + Q$. In addition, it has to incur transportation cost of ₹19 per bowl. Express this restaurant's profit π as a function of Q . Find the profit-maximizing quantity.
- (b) (1 point) Suppose the government imposes a tax on the restaurant's product of ₹2 per ramen bowl. Find the new expression for the store's profit.
7. (3 points) Let the universal set \mathbb{U} be the set of all students at a particular university. Moreover, let F denote the set of female students, E the set of all economics students, C the set of students in the university choir, P the set of all psychology students, and T the set of all students who play tennis. Describe the members of the following sets: $\mathbb{U} \setminus C$, $E \cup T$, $P \cap F' \cap T'$. No calculation is needed.
8. (3 points) Consider two matrices $A = \begin{bmatrix} 7 & -4 \\ 2 & 1 \end{bmatrix}$ and $I = \begin{bmatrix} 1 & 0 \\ 0 & 1 \end{bmatrix}$. Find a matrix C such that $(A - 6I)C = I$.

Long Answer Questions

9. (5 points) Calculate the domain and the range of the following functions:

(a) (2 points)

$$f(x) = \frac{6x + 5}{2x - 3}$$

(b) (3 points)

$$g(x) = \frac{9}{\sqrt{x^2 - 9}}$$

10. (5 points) This question tests your knowledge and understanding of present value and interest rates. Assume compounding of the interest rate.
- (a) (1 point) A sum of ₹50,000 is invested at 2% annual interest. What will this amount have grown to after 20 years?
- (b) (2 points) Which terms are preferable for a borrower: (i) an annual interest rate of 45%, with interest paid yearly; or (ii) an annual interest rate of 36.5%, with interest paid daily?
- (c) (2 points) An account has been dormant for many years earning interest at the constant rate of 12% per year, with interest being compounded every month. Now the amount is ₹104,000. How much was in the account 8 years ago?

Appendix

$\ln(10)$	\approx	2.3026
$\ln\left(\frac{1}{10}\right)$	\approx	-2.3026
$(1.02)^{20}$	\approx	1.486
$(1.2)^{20}$	\approx	38.338
$(1.001)^{365}$	\approx	1.4402
$(1.01)^{12}$	\approx	37.783
$(1.12)^8$	\approx	2.5
$(1.01)^8$	\approx	1.1
$(1.01)^{96}$	\approx	2.6
